

Question 3:

Your program allows the user to enter an array of 'n' integer numbers, where 'n' is entered from the keyboard (STDIN).

Program to print the odd numbers sorted in ascending order. There is a newline character '\n' between any two printed numbers.

Below is an example when 'n' =7; elements: {5,-4, 5,9, 15,8, 10}

```
7
5 -4 -5 9 15 8 10

OUTPUT:
-5
5
9
15

Press any key to continue . . .
```
