Question 5:

Your program allows users to enter an array of 'n' integer numbers, where the user enters 'n' (0<n<10).

Then the user enters an integer number 'p' which is the position of an element to remove from the array (0< p <= n).

Below is an example of how the program will run when entering the values: 5 for 'n'; the values of the array include '6 10 0 9 7';   3 for 'p'

```
5
6
10
0
9
7
3

OUTPUT:
6
```
